

ICSE-2001**Section A (40 Marks) (Attempt all questions from this section)****Question 1**

(a) Name (formula is not acceptable) the gas produced in each of the following reactions

(i) Action of concentrated nitric acid on copper. \_\_\_\_\_

(ii) Exposure of chlorine water to sunlight. \_\_\_\_\_

(iii) Burning of sulphur. \_\_\_\_\_

(iv) Heating of ammonium nitrate  
(name only the nitrogen containing compound). \_\_\_\_\_

(v) Warming ammonium sulphate with sodium hydroxide solution. \_\_\_\_\_

(b) State what you observe when:

(i) Neutral litmus solution is added to an alkaline solution.  
\_\_\_\_\_

(ii) Ammonium hydroxide is added to iron (III) sulphate solution.  
\_\_\_\_\_

(ii) Lead nitrate solution and sodium chloride solution are mixed.  
\_\_\_\_\_

(iv) Ethene is bubbled through a solution of bromine in tetra chloromethane (CCl<sub>4</sub>).  
\_\_\_\_\_

(v) Sulphur burns.  
\_\_\_\_\_

(c) (i) When gases react together, their reaction volume bears a simple ratio to each other under the same conditions of temperature and pressure.  
Who proposed this gas law?  
\_\_\_\_\_

(ii) What volume of oxygen would be required for the complete combustion of 100 litres of ethane according to the following equation? [1]

- (iii) The gases chlorine, nitrogen, ammonia and sulphur dioxide are collected under the same conditions of temperature and pressure. Copy the following table which gives the volumes of gases collected and the number of molecules (X) in 20 litres of nitrogen. You are to complete the table giving the number of molecules in the other gases in terms of X. [3]

Gases	Volume(litres)	Number of molecules
Chlorine	10	
Nitrogen	20	
Ammonia	20	
Sulphur Dioxide	5	

- (d) Copy and complete the table. The table summarizes the observations following the addition of barium chloride solution and lead nitrate solution to solutions of zinc salts. If nothing happens write "No reaction" or write "White Precipitate". [5]

	Barium chloride solution	Lead nitrate solution
Zinc chloride solution		
Zinc nitrate solution		No reaction
Zinc sulphate solution		

- (e) Calculate the % of phosphorus in the fertilizer super phosphate  $\text{Ca}(\text{H}_2\text{PO}_4)_2$ . (P=31 ;Ca=40) [3]

---

---

---

---

- (ii) Write and balance following equation correctly- [1]

- (iii) Copy and complete the following sentence- [1]

Super phosphate is an example of a compound called \_\_\_\_\_  
(acid salt/basic salt/normal salt).

- (f) Write the balanced equations for the following reactions of- [5]

- (i) Dilute hydrochloric acid and sodium sulphite.

- (ii) Chlorine and hot concentrated potassium hydroxide solution.

(iii) An acid and an alkali.

(You must first write – “The acid is \_\_\_\_\_ and the alkali is \_\_\_\_\_.” Then write the equation).

(g) Copy and complete the following sentence choosing the correct word or words from those given in brackets at the end of each sentence:-

(i) The properties of the elements are a periodic function of their \_\_\_\_\_ (atomic number, mass number, relative atomic mass).

(ii) Moving across a \_\_\_\_\_ of the periodic Table the elements showing increasing \_\_\_\_\_ character. (group, period, metallic, non metallic).

(iii) The elements at the bottom of a group would be expected to show \_\_\_\_\_ metallic character than the elements at the top. (less, more).

(iv) The similarities in the properties of a group of elements is because they have the same \_\_\_\_\_ (electronic configuration, number of outer electrons, atomic numbers.)

(h) Mention the terms defined by the following sentences:-

(i) The mass of a given volume of gas compared to mass of an equal volume of hydrogen.

(ii) A soluble base

(iii) The insoluble solid formed when two solutions are mixed together.

(iv) Compounds containing carbon and hydrogen only.

(v) An acidic solution in which there is only partial ionization of the solute molecules

**Section – B (40 marks) (Attempt any four questions from this section)**

**Question 2**

(a) Write the equation for:-

(i) The preparation of Hydrogen chloride from Sodium chloride and Sulphuric acid. State whether the Sulphuric acid should be concentrated or dilute.

(ii) The preparation of Ammonia from Ammonium chloride and Calcium hydroxide.

(iii) The reaction of hydrogen chloride with ammonia.

(b) **D** (i) What are the products formed when Ammonia is oxidized with copper oxide. **A** [3]

(ii) Name one lead compound that can be used to oxidized hydrogen chloride to chlorine. **A** [1]

(c) **H** What is the difference between the chemical nature of an aqueous solution of hydrogen chloride and aqueous solution of ammonia? **S** [2]

### Question 3

(a) Choosing only words from the following list, writedown the appropriate words to fill in the blanks (i) to (v) below- **H** [5]

**R** Addition, carbohydrates,  $C_nH_{2n-2}$ ,  $C_nH_{2n}$ ,  $C_nH_{2n+2}$ , electrochemical, homologous, hydrocarbons, saturated, substitution, unsaturated. **H**

The alkanes form an (i) \_\_\_\_\_ series with the general formula (ii) \_\_\_\_\_. The alkanes are (iii) \_\_\_\_\_ (iv) \_\_\_\_\_ which generally undergo (v) \_\_\_\_\_ reactions.

(b) Ethanol can be converted to ethane which can then be changed to ethane. **E** [4]

Choose the correct word or phrase from the brackets to complete the following sentences

(i) The conversion of ethanol to ethane is an example of \_\_\_\_\_ (dehydration, dehydrogenation) **E**

(ii) Converting ethanol to ethane requires the use of \_\_\_\_\_ (conc. hydrochloric acid, conc. nitric acid, conc. sulphuric acid.) **E**

(iii) The conversion of ethene to ethane is an example of \_\_\_\_\_ (hydration, hydrogenation)

(iv) The catalyst used in the conversion of ethane is commonly \_\_\_\_\_ (iron, cobalt, nickel.) **R**

(c) **V** Write down the equation for the preparation of ethyne from calcium carbide. **R** [1]

## Question 4

(a) Choose the correct word from the brackets to complete the sentences [4]

(a)(i) & (a)(iii)

(i) Sulphur can be converted to sulphuric acid using \_\_\_\_\_ (conc. / dilute) nitric acid.

(ii) Write down the equation for the reaction in 4(a) (i).

\_\_\_\_\_

(iii) Sodium nitrate reacting with \_\_\_\_\_ (concentrated/dilute) sulphuric acid produces nitric acid.

(iv) Write the equation for the reaction in 4(a) (iii).

\_\_\_\_\_

(b) Write down the equation for the reaction:

(i) Dilute nitric acid producing carbon dioxide.

\_\_\_\_\_

(ii) Dilute sulphuric acid producing hydrogen.

\_\_\_\_\_

(iii) Between copper and concentrated nitric acid.

\_\_\_\_\_

(iv) Between lead nitrate solution and dilute sulphuric acid.

\_\_\_\_\_

(c)

(i) Classify the solutions of the following as acids, bases or salts-

Ammonium hydroxide, \_\_\_\_\_

Barium chloride, \_\_\_\_\_

Sodium chloride, \_\_\_\_\_

Sodium hydroxide, \_\_\_\_\_

H<sub>2</sub>SO<sub>4</sub> and \_\_\_\_\_

HNO<sub>3</sub>. \_\_\_\_\_

(ii) Explain how a reagent chosen from those in 4(c)(i) enables you to distinguish between the two acids mentioned therein.

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

## Question 5

- (a) A metal M forms a volatile chloride containing 65.5% chlorine. If the density of the chloride relative to hydrogen is 162.5, find the molecular formula of the chloride. (M=56; Cl =35.5) [4]

Ele	%	RAM	Atomic ratio	Simplest ratio

- (b) The reaction  $4 \text{N}_2\text{O} + \text{CH}_4 \rightarrow \text{CO}_2 + 2 \text{H}_2\text{O} + 4 \text{N}_2$  takes place in the gaseous state. If all volumes are measured at the same temperature and pressure, calculate the volumes required to give  $150 \text{ cm}^3$  of steam (N= 14, O= 16, C = 12, H= 1) [2]

- (c) From the equation -  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \rightarrow \text{Cr}_2\text{O}_3 + 4\text{H}_2\text{O} + \text{N}_2$  Calculate: (N=14, Cr=52) [4]

- (i) The volume of nitrogen at STP, evolved when 63g of ammonium dichromate are heated.

(ii) The mass of Chromium (III) oxide ( $\text{Cr}_2\text{O}_3$ ) formed at the same time.

D \_\_\_\_\_ A

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

Question 6

(a) Choosing only substance from the list given in the box below, write equations for the reactions which you would use in the laboratory to obtain-(i) Sodium Sulphate. (ii) Copper sulphate. (iii) Iron (II) sulphate. (iv) Zinc carbonate. [5]

Dilute sulphuric acid	Copper	Copper carbonate
	Iron	Sodium Carbonate
	Sodium	
	Zinc	

R \_\_\_\_\_ H

\_\_\_\_\_

\_\_\_\_\_

(b) From formula listed below, choose one, in each case, corresponding to the salt having the given description-  $\text{AgCl}$ ,  $\text{CuCO}_3$ ,  $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ ,  $\text{KNO}_3$ ,  $\text{NaCl}$ ,  $\text{NaHSO}_4$ ,  $\text{Pb}(\text{NO}_3)_2$ ,  $\text{ZnCO}_3$ ,  $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ . [5]

(i) an acid salt. \_\_\_\_\_

(ii) an insoluble chloride. \_\_\_\_\_

(iii) on treating with concentrated sulphuric acid, this salt changes from blue to white. \_\_\_\_\_

(iv) on heating, this salt changes from green to black. \_\_\_\_\_

(v) this salt gives nitrogen dioxide on heating.. \_\_\_\_\_

U \_\_\_\_\_ E

\_\_\_\_\_

\_\_\_\_\_

V \_\_\_\_\_ R

\_\_\_\_\_

\_\_\_\_\_

## Question 7

(a) Zinc is extracted from zinc blende. The zinc blende is roasted. The solid product is mixed with coke in a blast furnace from which zinc vapour emerges.

[5]

(i) What is the zinc compound in zinc blende?

(ii) Write the equation for the roasting of zinc blende.

(iii) What is the purpose for using coke?

(iv) What is the reducing agent in this extraction?

(v) *How is the zinc vapour condensed to liquid?*

(b) From metals copper, iron, magnesium, sodium, and zinc, select a different metal in each case-

(i) does not react with dilute hydrochloric acid.

(ii) can form  $2^+$  and  $3^+$  ions.

(iii) has a hydroxide that reacts with both acids and alkalis.

(iv) does not react with cold water but reacts with steam when heated.

(c) Arrange the metals of 7(b) in decreasing order of reactivity.

[1]
